

ANNUAL SUSTAINABILITY REPORT

UNIVERSITAS AHMAD DAHLAN

2022

! "#\$%&# "

Dr. Muchlas Arkanuddin, M.T.
Rector of Universitas Ahmad Dahlan

Ahmad Dahlan University is committed to realizing an environmentally friendly and sustainable campus through various Higher Education chess dharma activities. UAD encourages the academic community to innovate to keep up with the challenges of the times, adapt to technological advances, and harmonize campus activities by utilizing digital technology to reduce non-renewable energy consumption. We are sure that UAD can be a comfortable home for present and future generations!

Kabupaten Kulon Progo

Description:

Universitas Ahmad Dahlan (UAD) is developed from the Institute of Teacher Training and Education (IKIP) Muhammadiyah of Yogyakarta. IKIP Muhammadiyah of Yogyakarta, as a higher education institution, was developed from the branch of FKIP Muhammadiyah of Jakarta in Yogyakarta, which was established on November 18th, 1960. FKIP Muhammadiyah Yogyakarta was the continuation of BI Muhammadiyah course in Yogyakarta, which was established in 1957. At that time, BI course provided a number of majors, including Educational Sciences, Law Civics and Economics. On December 19th, 1994 with the Decree (SK) of the Minister of Education and Culture of the Republic of Indonesia Number: 102/D/0/1994, it was determined that IKIP Muhammadiyah of Yogyakarta was converted then into Universitas Ahmad Dahlan

Universitas Ahmad Dahlan has 6 campuses dispersed across the Province of the Special Region of Yogyakarta. Campus 1, campus 2, campus 3, and campus 5 are located in the city of Yogyakarta. Campus 4, which is considered the main campus, is located in Bantul Regency, and Campus 6 is located in Kulonprogo Regency. UAD has 11 faculties and Types of higher education institutions as comprehensive education.

In the UI GreenMetric 2021 assessment, we proposed that campus 4 or the main campus be submitted as an assessment site because the main campus includes an overview of all campuses at UAD. The location of UAD is in the city center so it is easily accessible.

[2] Energy and Climate Change (EC)

[2.1] Energy Efficient-Appliance Usage

Example of Energy Efficient-Appliance Usage: Use of inverter air conditioner (Universitas Ahmad Dahlan, Indonesia)

Example of Energy Efficient-Appliance Usage: Use of LED lighting and lamps (Universitas Ahmad Dahlan, Indonesia)

Description:

Ahmad Dahlan University is committed to actualize a green campus. The starting point of this process is begun with the provision of energy-efficient equipment to reduce the use of electricity and emissions. These energy saving tools are including LED lamps, fan installments, and AC inverters. UAD saves about 80.5% of energy compared to the total energy spent using LED lamps and AC inverters. All UAD buildings on campus four already use energy-efficient equipment. This is the aim of supporting the realization of a green and sustainable campus.

Calculation:

Device	The appliance of energy-efficient compared to the total device installed	Total number energy Efficient appliances	Percentage
LED Lamp	636/7.248	8.395 W/ 95.673 W	91%
AC inverter	579/836	1.078.654 W/ 1.813.327 W	69 %
		Average Percentage	80.5%

Template for Evidence(s) UI GreenMetric Questionnaire

[2] Energy and Climate Change (EC)

[2.3] Smart Building Implementation

*Min. at least five requirements for each building

No.	Name	Place	aut om ation		safety				ene rgy		wat er		Indoor environment				lighting				Building Area (m ²)	
			B1	B2	S1	S2	S3	S4	E1	E2	A1	A2	I1	I2	I3	I4	L1	L2	L3	L4		
1	Universitas Ahmad Dahlan, 4 th Campus; Medicine Building	Yogyakarta, Indonesia		X		X	X											X			X	1856
2	Universitas Ahmad Dahlan, 4 th Campus; Laboratory Building	Yogyakarta, Indonesia				X	X											X			X	3259
3	Universitas Ahmad Dahlan, 4 th Campus; Main Building	Yogyakarta, Indonesia		X		X	X											X			X	3760
4	Universitas Ahmad Dahlan, 4 th Campus; Islamic centre building	Yogyakarta, Indonesia				X	X											X			X	1286
5	Universitas Ahmad Dahlan, 4 th Campus; Dormitory building	Yogyakarta, Indonesia				X	X											X			X	558
Total																						10.719

Please compile one row for each building (or homogeneous part of it) by ticking with an "X" for each requirement

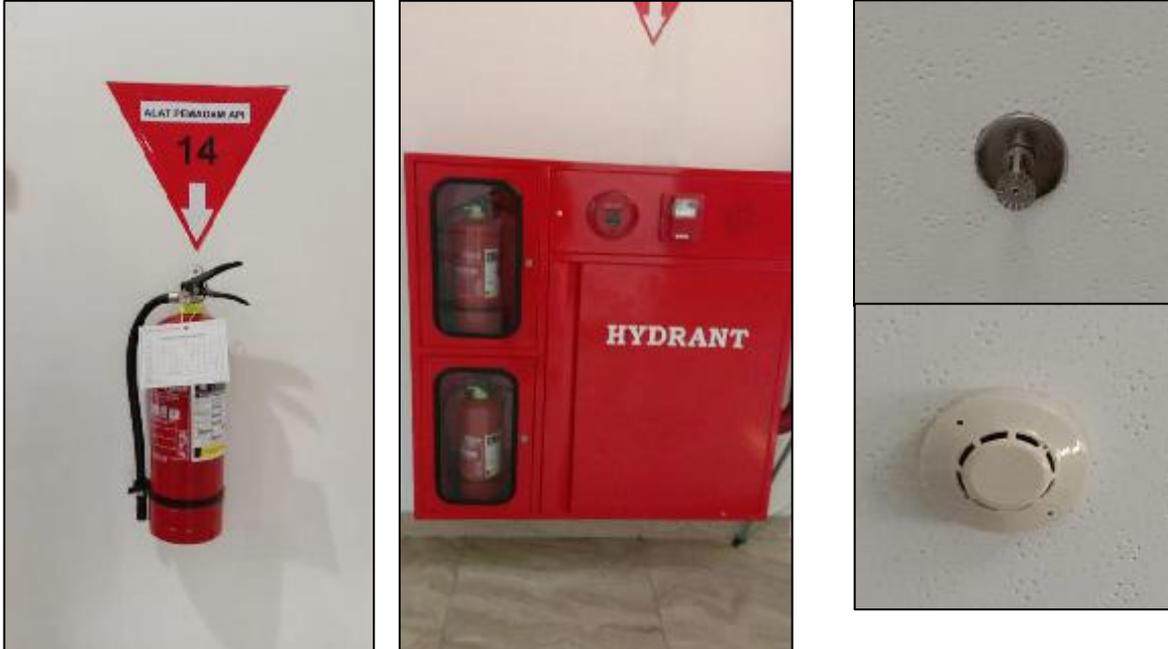

Smart building implementation

$$\frac{\text{Total Smart Building Area}}{\text{Total Building Area}} \times 100\%$$

$$\frac{5,616}{10,719} \times 100\% = 52\%$$

Note: One building could be classified as a smart building if it has a minimum of 5 features. Please add the total smart building area from buildings classified as smart buildings.

All Buildings at 4th Campus, Universitas Ahmad Dahlan

Firefighting system in all buildings (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

Central AC controller app – (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

CCTV – (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

LED - All buildings use LED lights (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

Natural Light – All buildings are designed to have natural light

UAD buildings are built in a modern way to keep the building as natural as possible. The pro-formation of the building with air circulation together with fins and windows makes classrooms and offices not require excessive air conditioning. The presence of windows allows for a bright room without the need to turn on unnecessary lights.

The UAD building is equipped with automation that supports all equipments to be controlled remotely, including air conditioning control and lighting control. In addition, the escalator at UAD is smartly designed to slow down when it is not in use, thereby it reduces electricity usage.

Template for Evidence(s) UI GreenMetric Questionnaire

University : Universitas Ahmad Dahlan
Country : Indonesia
Web Address : <https://uad.ac.id/en/>

[2] Energy and Climate Change (EC)

[2.5] Renewable Energy Sources in Campus

Solar Panel Unit – Laboratorial Building (Universitas Ahmad Dahlan, Indonesia)

Dr. Zahriul Mufredi, S.T., M.T. "Menyalap Sampah Plastik Menjadi Bahan Bakar Minyak"

Biomass implementation (Universitas Ahmad Dahlan, Indonesia)

Description:

The solar panel is installed on the roof-top of the Laboratory Building, 4th Campus UAD. This solar panel produces 2.6 Kwp of power. 1Kwp generates electricity for 8 hours from 8 a.m. to 4 p.m. So, the total is approximately 3.5 (4) kWh with the intensity of sunlight in Yogyakarta. Based on that, the electricity consumption from PLN is reduced by 3.5 kWh per day or equivalent to IDR 5,000 (PLN electricity tariff is IDR 1,400/kWh). It means the electricity budget reduced in one month is IDR 150,000.

While from biomass management that processes an organic waste into fuel oil, UAD yields 2.5 kW for every 20 kg of an organic waste.

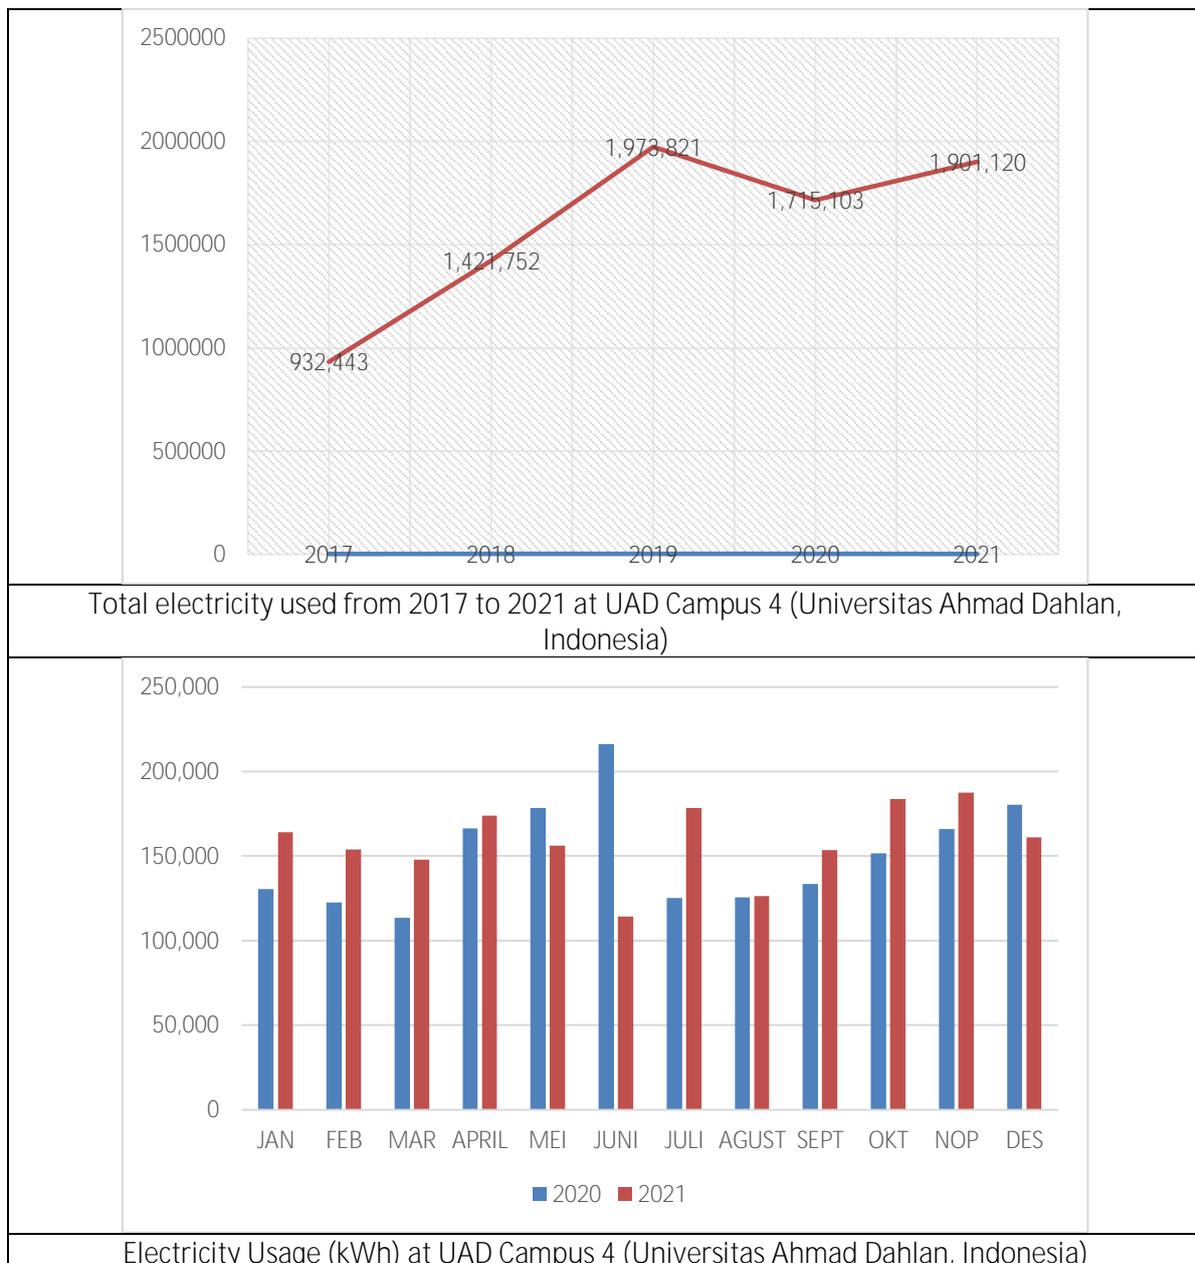

Template for Evidence(s) UI GreenMetric Questionnaire

University : Universitas Ahmad Dahlan
Country : Indonesia
Web Address : <https://uad.ac.id/en/>

[2] Energy and Climate Change (EC)

[2.6] Electricity Usage per Year (in Kilowatt hour)

Description:

The total electricity usage at Campus 4 UAD in 2020 was 1,715,103 kWh, then slightly increased in 2021 and reached to 1,901,120 kWh. The use of electricity between 2017-2021 tended to increase due to the construction of new buildings in these locations, thus it required electrical support. Apart from construction, electricity was used for regular lighting, air conditioning, and laboratories.

Template for Evidence(s) UI GreenMetric Questionnaire

University : Universitas Ahmad Dahlan
Country : Indonesia
Web Address : <https://uad.ac.id/en/>

[2] Energy and Climate Change (EC)

[2.8] Ratio of renewable energy production divided by total energy usage per year

Solar panel installed on the roof-top of laboratory building (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

Dr. Zahral Mukrodi, S.T., M.T. "Menyalap Sampah Plastik Menjadi Bahan Bakar Minyak"

Biomass implementation (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

Description:

The renewable energy at UAD is gathered through 2 activities:

- 1) The solar panel is installed on the roof-top of the Laboratory Building, 4th Campus UAD. This solar panel produces 2.6 Kwp of power. 1 Kwp generates electricity for 8 hours from 8 a.m. to 4 p.m. So, the total is approximately 3.5 (4) kWh with the intensity of sunlight in Yogyakarta.
- 2) Biomass management of UAD has processed an organic waste into fuel oil. The production capacity of this tool is 2.5 kW for every 20 kg of an organic waste.

No	Renewable Energy	Production (in kWh)/per year
1	Biomass	1.260 kW
2	Solar panel	936 kWp
	Total	2.196 kW

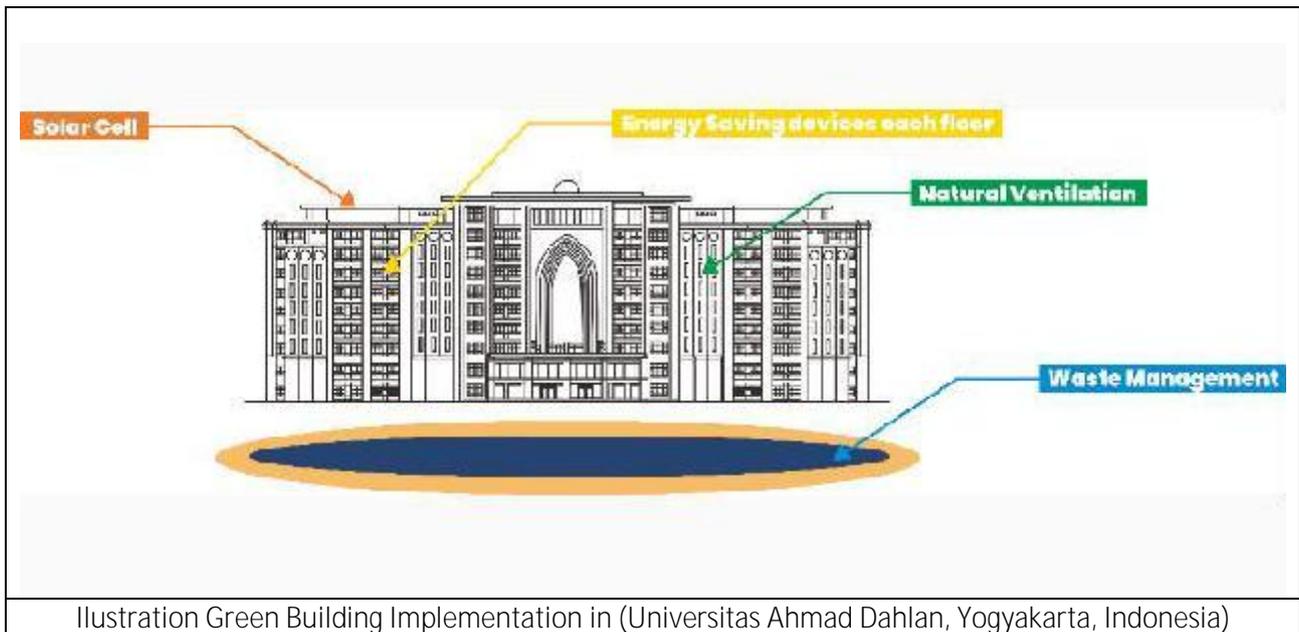

$$\text{Efficiency} = 2.196 / 1.901.120 \text{ (Electricity usage)} = 0.11 \%$$

Template for Evidence(s) UI GreenMetric Questionnaire

University : Universitas Ahmad Dahlan
Country : Indonesia
Web Address : <https://uad.ac.id/en/>

[2] Energy and Climate Change (EC)

[2.9] Elements of Green Building Implementation as Reflected in All Construction and Renovation Policies

Description:

All buildings at UAD have energy-saving element, such as natural ventilation on every floor in each building. In addition, all facilities use energy-saving devices such as LED lights, fans, and AC inverters. A solar panel was installed to utilize renewable energy to convert solar power into electric power in one of the buildings. At UAD 4th campus, there are installations for processing waste, both organic and inorganic.

Template for Evidence(s) UI GreenMetric Questionnaire

University : Universitas Ahmad Dahlan
Country : Indonesia
Web Address : <https://uad.ac.id/en/>

[2] Energy and Climate Change (EC)

[2.10] Greenhouse Gas Emission Reduction Program

Solar Panel Unit – Laboratorial Building (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

Dr. Zahrul Muftodi, S.T., M.T. *Menyalap Sampah Plastik Menjadi Bahan Bakar Minyak*

Biomass implementation (Universitas Ahmad Dahlan, Yogyakarta, Indonesia)

Description:

The solar panel was installed on the roof-top of the Laboratory Building, 4th Campus UAD. This solar panel produces 2.6Kwp of power. 1Kwp generates electricity for 8 hours from 8 a.m. to 4 p.m. So, the total is approximately 3.5 kWh with the intensity of sunlight in Yogyakarta. Based on that, the electricity consumption from PLN is reduced by 3.5 kWh per day or equivalent to IDR 5,000 (PLN electricity tariff is IDR 1,400/kWh). It means that the electricity budget reduced in one month is IDR 150,000 or equal to IDR 1.800.000 per year.

Biomass management implemented in UAD is to convert inorganic waste into fuel oil that can be used for energy-saving purposes. The production scale of this unit is every 20kg of inorganic waste will produce 2.5 kW. Thus, in 1 year, the amount of energy produced is 975 kW or equivalent to IDR 1.365.000.

Template for Evidence(s) UI GreenMetric Questionnaire

University : Universitas Ahmad Dahlan
Country : Indonesia

[2] Energy and Climate Change (EC)

[2.11] Please Provide The Total Carbon Footprint (CO₂ Emission in The Last 12 Months, in Metric Tons)

Option 2: Recommended by UI GreenMetric

CO₂ (electricity)

$$\begin{aligned} &= \frac{\quad (\quad)}{1000} \times 0,84 \\ &= \frac{1,901,120}{1000} \times 0,84 \\ &= 1,596.9 \text{ metric tons} \end{aligned}$$

CO₂ (bus)

$$\begin{aligned} &= \frac{\quad \times \quad \times \quad (\quad) \times 240}{100} \times 0,01 \\ &= \frac{0 \times 240}{100} \times 0,01 \\ &= 0 \text{ metric tons} \end{aligned}$$

CO₂ (cars)

$$\begin{aligned} &= \frac{\quad \times 2 \times \quad (\quad) \times 240}{100} \times 0,02 \\ &= \frac{114 \times 2 \times 0,5 \times 240}{100} \times 0,02 \\ &= 5.4 \text{ metric tons} \end{aligned}$$

CO₂ (motorcycle)

$$\begin{aligned} &= \frac{\quad \times 2 \times \quad (\quad) \times 240}{100} \times 0,01 \\ &= \frac{1.230 \times 2 \times 0,5 \times 240}{100} \times 0,01 \\ &= 29.6 \text{ metric tons} \end{aligned}$$

CO₂ (total)

$$\begin{aligned} &= 1,596.9 + 0 + 5.4 + 29.5 \\ &= 50,869 \text{ metric tons} \end{aligned}$$

Carbon footprint in 2021 = 50,869 metric tons

Total Carbon Footprint (UI GreenMetric)

Description:

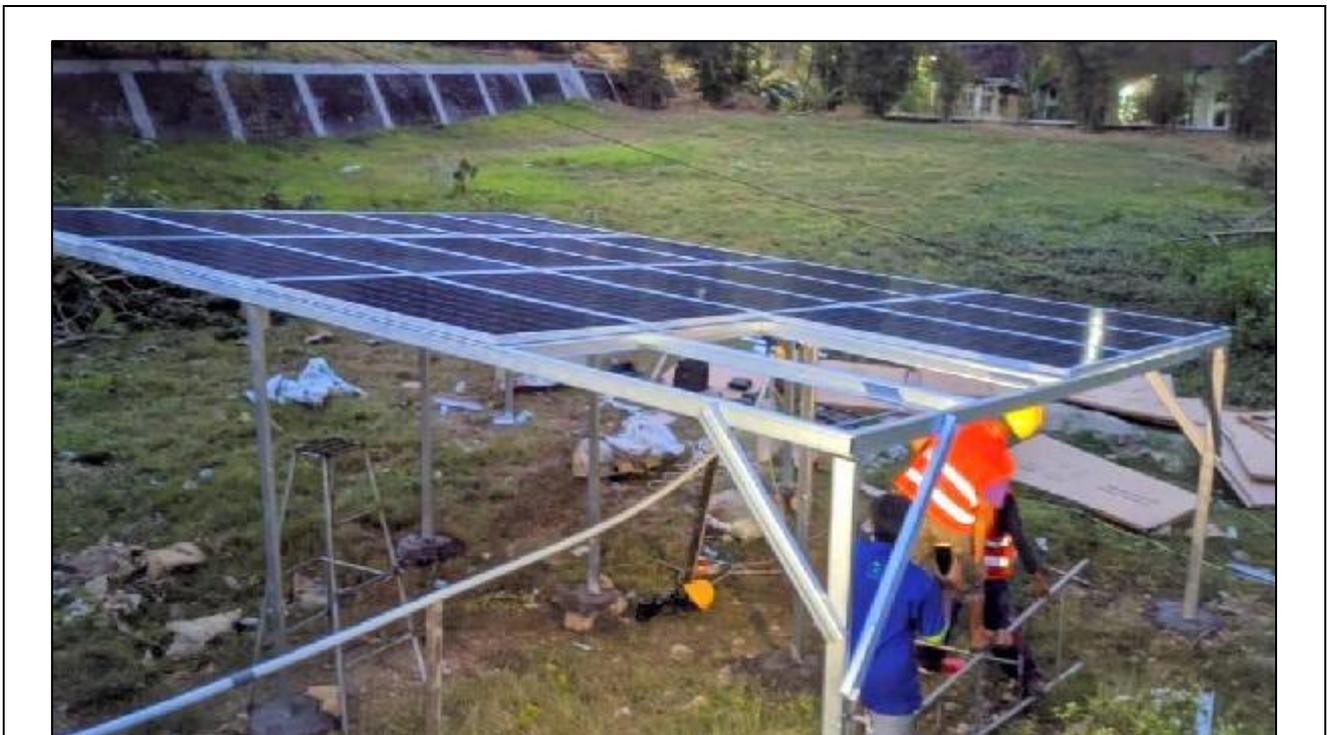

The carbon footprint produced on campus 4 of UAD was 50,869 metric tons. UAD tried to limit the number of vehicles entering the campus with some strategies. However, it was not possible to be implemented completely at one time but in stages. Currently, the footprint carbon reduction regulation is on the stage of limited implementation.

<https://fti.uad.ac.id/tag/becak-listrik/>

Description:

UAD continues to innovate to reduce emissions on campus and to contribute broadly to society. Some of the innovations made are including

1. Through the community service program, UAD builds solar panels in targeted areas to help the community in term of efficiency of electricity consumption.
2. The development of electric cars, which have won several competitions, is an innovation that is currently being proudly done to reduce emissions from motorized vehicles.
3. Processing plastic waste into oil is also an innovation to utilize waste properly and to be able to become an alternative energy source.
4. Recycling used cooking oil into solid soap is also a form of reducing pollution that has an impact on climate change and provides economic benefits to the community.
5. The development of electric tricycles is an innovation in collaboration with the Yogyakarta City government. This innovation is superior because the City of Yogyakarta has a characteristic of a City of Tourism with tricycles as tourist transportation.

Impactful University Program (Universitas Ahmad Dahlan, Indonesia)
Solar cell-powered automatic water pump technology in Wareng Village Gunungkidul

SIMONKORI (Sistem Monitoring, Kontrol & Irigasi)

Solar panel installed in Serut village, Gunungkidul

Description:

UAD develops various innovations to save energy to reduce CO2 emissions. Some of these innovations have been distributed to the community, including

1. The Faculty of Industrial Technology (UAD) builds a Biogas Reactor in Ngaliyan Hamlet, Ngangosari Village, Samigaluh District, Kulonprogo to support the processing of meat and milk produced by Etawa goats to be used as plant fertilizer media. News link: News Link: <https://lppm.uad.ac.id/tim-semesta-uad-ciptakan-energi-terbarukan-pengolahan-limbah-biogas-ternak-menjadi-energi-alternatif-dan-sumber-listrik-di-era-pandemi-bagi-masyarakat-desa-ngangosari-samigaluh-kulon-progo/>

2. This implemented solar cell-powered automatic water pump is integrated with water reservoirs for “empon-empon” cultivation in the area. Thus, the empon-empon farmer saves energy, and irrigation is well maintained.
3. SIMONKORI (Monitoring, Control & Irrigation System) has been used by farmers in several areas. This system is planned to be adopted by the Malaysian industry. News link: News

<p>Plastic Waste Processing Laboratory</p>	<p>Trash Sort</p>

<p>(Universitas Ahmad Dahlan, Indonesia)</p> 	<p>(Universitas Ahmad Dahlan, Indonesia)</p> 
<p>MoU with PT Kibar Jaya (Universitas Ahmad Dahlan, Indonesia)</p>	<p>Seminar On Waste Management (Universitas Ahmad Dahlan, Indonesia)</p>
	
<p>P2K Invites Waste Care (Universitas Ahmad Dahlan, Indonesia)</p>	<p>GCC Sorts Garbage at P2K Events (Universitas Ahmad Dahlan, Indonesia)</p>
	
<p>Appeal to Reduce Plastic Use (Universitas Ahmad Dahlan, Indonesia)</p>	<p>Paper Saving Appeal (Universitas Ahmad Dahlan, Indonesia)</p>

Ahmad Dahlan University has implemented a waste recycling program including:

1. Ahmad Dahlan University giving tumblers to all campus community to reduce mineral bottle
2. Ahmad Dahlan University giving reusable plastic bags
3. Students upload the final project report, research report, and practical report to e-print.uad.ac.id not a hard copy
4. Invitation meeting by email and google calendar

5. Build a plastic waste processing laboratory
6. Provide sorting trash bins both inside and outside the campus
7. Cooperate with external parties, namely CV Kibar Jaya in the management of plastic and paper waste
8. Hold a seminar on waste management
9. P2K invites Young Dahlan to Care for Garbage
10. The GCC program cares about waste, sorting waste and donating electronic waste
11. Appeal not to use plastic and be wise in using paper
12. Waste prevention and management policies

**Pasal 4
Pencegahan Limbah**

1. Pencegahan limbah ditujukan untuk mengurangi jumlah limbah seminimal mungkin.
2. Kegiatan yang menghasilkan dokumen di lingkungan UAD diarahkan paperless
3. Pengiriman dokumen antar unit di UAD diutamakan menggunakan surat elektronik
4. Pencetakan dokumen yang masih bersifat draft di cetak bolak-balik.
5. Penggunaan plastik sekali pakai sedapat mungkin dikurangi dengan beralih ke plastik biodegradable atau bahan yang dapat digunakan kembali (reusable)

**Pasal 5
Pengelolaan Limbah**

1. Pengelolaan limbah ditujukan untuk mengurangi dampak limbah terhadap lingkungan
2. Limbah kertas dan plastik diutamakan didaur ulang
3. UAD melakukan pemilahan sampah meliputi limbah organik, anorganik dan Bahan Berbahaya dan Beracun (B3)
4. Pengelolaan limbah dapat dilakukan secara mandiri maupun kerjasama dengan pihak yang ditunjuk.

[4] Water (WR)

[4.1] Water Conservation Program Implementation

Water Conservation - Rain Water Collection
(Universitas Ahmad Dahlan, Indonesia)

Water Conservation – Pool of campus
(Universitas Ahmad Dahlan, Indonesia)

Water Conservation – Pedestrian Paths And Parks
Covered With Blocks
(Universitas Ahmad Dahlan, Indonesia)

The rest of the need for clean water is met by deep water wells. The campus of Universitas Ahmad Dahlan has water conservation programs in the form of:

1. Rainwater is collected from the top floor of the building. There are 10 pieces of Rainwater (RW @ 150) each of which accommodates 3 Roof Water Channels (RD @ 100). Every 2 to 3 RWs are accommodated in the Rainwater Storage Pool (RSP) which is located below the pond. The function of this Rainwater Storage Pool is as a water reserve and if the RSP is full then the water is pumped into the pool.

2. A pool is in front of the main building with a length of 68.5 m, a width of 23.7 m, and a deep 1.5 m. This pool functions as a reservoir for rainwater runoff from the streets and campus yards. This pool can accommodate 2000 m³ of rainwater runoff.
3. Most of the area outside the building is covered with blocks and the rest is planted with grass.
4. Rainwater conservation = wells capacity : high volume of rainwater.

Wells Capacity	Rainwater Volume	Conservation	Percentage
214 m ³	169 m ³	169	100

[4] Water (WR)

[4.2] Water Recycling Program Implementation

The Example of Water Recycling in STP
(Universitas Ahmad Dahlan, Indonesia)

The Example of Water Recycling for Garden Sprinklers
(Universitas Ahmad Dahlan, Indonesia)

The Example of Water Recycling for Toilet Flushes
(Universitas Ahmad Dahlan, Indonesia)

Water Recycling Program Implementation at Universitas Ahmad Dahlan:

1. The current condition of Universitas Ahmad Dahlan has its formal policy for implementation water recycling as formally written under the following decree.

Pasal 6

Pengelolaan air

Pengelolaan sumberdaya air didasarkan pada kebutuhan dan kemampuan kampus dengan:

- a. Melakukan efisiensi penggunaan air bersih;
- b. Membangun sumur resapan, biopori dan struktur pemanen air hujan yang lain;
- c. Menggunakan air hasil pengolahan untuk mengurangi penggunaan air bersih; dan/ atau
- d. Memiliki tanki air.

2. Water recycling program

- a. The rainwater Storage Pool (RSP) with a volume of $60 \times 15 \times 1.8 = 1,620 \text{ m}^3$ is a rainwater overflowing pool from the roof of the building. the benefits of water in the RSP are as a backup for as a firefighter and to fill pond water.
- b. Wastewater from toilets and bathrooms is channeled into the STP building to be processed into reusable water. The stages of the process in the STP building start from filtering wastewater, settling, purifying water, collecting water from conservation, and pumping water from conservation to water reservoirs on the roof of the building. the capacity of the STP building is 9.8 m^2 .
- c. The recycled water is used as garden sprinklers and toilet flushes. The capacity of the dirty water recycling process is 9.8 m^3 and is used as wide as possible for garden sprinklers and toilet flushes. Water Recycling Program Implementation Conservation of dirty water = $\text{SWT capacity} : \text{waste water volume}$.

SWT Capacity	Wastewater Volume	Conservation	Percentage
9,8 m3	0,472 m3 x 20 waste water pipeline	9,44	100

Note:

SWT = Sewage Water Treatment

STP = Sewage Treatment Plant

SWT capacity = 9.8 m^3

[4] Water (WR)

[4.3] Water Efficient Appliances Usage (e.g. hand washing taps, toilet flush, etc.)

Water Efficient Appliances Usage at Universitas Ahmad Dahlan:

1. The toilet flushing uses water that has been conserved from the Sewage Treatment Program (STP) building which is pumped into the water reservoir on the roof of the building and then flows over the entire floor using gravity to be used as a toilet flush.
2. Most bathrooms are installed with Automatic sink faucets that use sensors.

Appliance	Total Number	Total number water Efficient appliances	Percentage
Toilet	116	116	100%
Wastafel	24	5	20%
		Average Percentage	60%

[4] Water (WR)

[4.4] Consumption of treated water

The results of water conservation in UAD come from STP with a capacity of 250 m³/day which has been able to meet 80% of daily clean water needs of 303 m³/day. 20% of clean water needs are taken from deep wells so that UAD is able to meet 80% of clean water needs from water conservation. Consumption of treated water is used for watering plants, washing cars, and flushing toilets.

Consumption	Jumlah	Kapasitas STP	Prosentase
STP building	0,492 m ³ x 20 saluran	250 m ³ /hari	250 / 303 = 0,825
Siram tanaman	80 m ³		
Sanitasi	270 m ³

[5] Transportation (TR)

[5.4] The total number of vehicles (cars and motorcycles) divided by total campus' population

No.	Vehicle	Total Number
1	Car managed by the university	26
2	Cars entering the university	88
3	Motorcycles entering the university	1230
	Total	1344

$$5.4 = 1344 / 1352 = 0.99$$

Description:

(Please describe the shuttle services on your campus. The following is an example of the description. You can describe more related items if needed.)

Universitas Ahmad Dahlan manages cars, trucks, and buses. The car is used for leadership mobility, picking up guests, and lecturers' work visits. Trucks are used to move supporting facilities for lectures and activities. The buses are used for work visits outside the city. UAD does not provide shuttle services because UAD is located near the highway and traversed by public transportation, "Trans Jogja," managed by the Yogyakarta City Government. The working cooperation between UAD and the Yogyakarta city government is the construction of the Trans Jogja shuttle in front of the campus 4 of Universitas Ahmad Dahlan. In addition, all student activities can be carried out on campus 4 of UAD without transportation. Facilities and infrastructure for lectures, practicum, library, student lounge, lecturer room, student dormitory, canteen, and worship activities are available on campus 4 of UAD.

Shuttle Bus

The shuttle bus is located in front of the campus, easily accessible by anyone.

[6] Education and Research (ED)

[6.1] Number of Courses/Subjects Related to Sustainability Offered

No	Courses	Course Description/Keywords
1	Environmental education	This course examines the nature, content of environmental education in elementary schools by utilizing the environment as a learning resource in order to support environmental conservation and sustainable development.
2	Environmental Science	Environmental Science courses discuss the basic principles of the environment; environmental components, global and local environmental problems; sustainable development goals (SDGs), air pollution includes: indoor air pollution, outdoor air pollution; water pollution; soil pollution; environmental management, and case studies on environmental issues.
3	Ecotourism	The ecotourism course aims to equip students majoring in biology education to be able to interact with the outside world other than school. In addition, so that students are able to communicate well through oral or written and can contribute to improving the quality of society through studies on ecotourism.
4	Amdal	The AMDAL course studies sustainable development tools, environmental views with development, the scope of AMDAL, legal basis, ANDAL, UKL-UPL, RPL, RKL, SPPL, AMDAL documents, environmental permit processes, and AMDAL case studies.
5	Waste and Waste Treatment	This course studies the characteristics of types of waste, types of waste and their characteristics, the impact of waste and waste, B3 waste, B3 waste management, waste management, waste treatment, wastewater treatment, and waste water and waste treatment technology teknologi
6	Plant Ecology	This course is a course that contains the concept of ecology, studying the sampling method of biotic communities both plot and plotless
7	Electric Vehicle	Electric Vehicle is a course that discusses the technology that develops in green technology. This course discusses the history of conventional vehicle technology to the latest technology, namely electric vehicles. Electric vehicle technology has potential advantages compared to internal combustion engines, namely it does not produce exhaust gas emissions from motor vehicles.
8	Advanced Technology Automotive	Advance Technology Automotive discusses the latest automotive technology developments that can provide comfort, driving safety and engine performance efficiency so as to minimize environmental pollution.
9	Environmental Health Basics	The learning materials are related to the ecology of clean water supply, waste management of air pollution, and the link between pollution and disease incidence.

10	Environmental Quality Analysis	This lecture material is delivered with the aim of increasing students' awareness of the environment. The main subjects include environmental quality analysis of water, air and soil, as well as biomonitoring of environmental health.
11	Environmental Impact Analysis	This course contains material related to the importance of maintaining environmental aspects in developing a business and/or activity. The material presented is related to the relationship between amdal and environmental sustainability and also the steps of amdal.
12	Environmental Toxicology	This course material is related to how environmental risk agents enter the human body, what are the factors causing it and how to prevent it.
13	Environmental Health Risk Analysis	Environmental health risk analysis examines the linkage of agents that pose a risk to health and the environment. In addition, it also discusses how to estimate the impact that will arise in the future based on current environmental conditions.
14	Food and Beverage Sanitation Hygiene	This course discusses good food and beverage management in terms of the personal health of the handlers, environmental sanitation, and Hazard Analysis Critical Control Point (HACCP).
15	Sanitation Practice	Students who take the course will take part in the practice of sanitation field surveys, for example, Final Processing Sites (TPA), waste management sites, areas that care about processing waste or waste.
16	International Environmental Health Issues	This course discusses current developing issues related to global environmental health.
17	Sanitation of Public Places	Students are provided with knowledge about aspects related to sanitation (including aspects of waste management) in the environment in public places, the health impacts on not manage sanitation properly. In addition to theory, students also gain experience in surveying sanitation conditions in public places.
18	Residential and Building Health	Residential and building health discusses the health aspects that need to be considered in a settlement. A healthy house must of course be in accordance with the needs in supporting the health of its occupants, for example related to cleanliness, physical aspects of the house such as ventilation, lighting, waste and waste management, etc.
19	Environmental Policy and Management	Environmental Policy and Management (KML) is a course examining the policies of the central and local governments focusing on the environmental management. The development of the material includes sustainable development, strategic environmental studies, the relationship between community customs and environmental preservation, etc.
20	Waste and By-product Management Technology	This course contains of knowledge about environmental indicators, environmental control techniques

Description:

Below is a list of the percentage of sustainability courses compared to the total courses offered in each faculty. Sustainability covers all environmental, social and energy aspects, with keywords related to sustainability such as green, environment, sustainability, renewable energy, climate change, waste (Details can be seen in [University_Country_6_1 Evidence]).

Total number of courses with sustainability embedded for courses running in 2021 = 144 courses

[6.4] Total Research Funds Dedicated to Sustainability Research (in US Dollars)

Research fund on Sustainability (USD)

Description:

The image above shows the total research funding focusing on the sustainability research in the last 3 years (2019, 2020, and 2021). During the 3 years, the number of funds addressing sustainability steadily increased. The average annum last 3 years of research fund dedicated to sustainability research is = 31.486,74 US Dollars. Through LPPM UAD, the campus encourages lecturers to conduct research on sustainability. One of them is through a study center that focuses on sustainability, namely PSEL UAD <http://psel.uad.ac.id/>

[6.8] Number of Events Related to Sustainability

Events Related to Sustainability (Ahmad Dahlan University, Indonesia)

Description:

In 2019 – 2021 UAD has many events related to sustainability that can be grouped into (a) Seminars, (b) Community Service, (c) Webinars, (d) Workshops, (e) Tree Planting, and (f) Competitions. Activities in the form of seminars and webinars are carried out by study programs and institutions to provide understanding to the community. Community service activities are held by both lecturers and student organizations. Tree planting activities are example of sustainability activities implemented as part of community service activities. Activities in the form of competition are held as an effort of UAD to increase awareness, concern, and to motivate the UAD academic community and society to maintain sustainability.

The total number of sustainability/environment-related events

In 2019 : 8

In 2020 : 19

In 2021 : 30

A total average per annum over the last three years is 19 events

PROGRAM PENGABDIAN

UAD Dampingi Pengelolaan Bank Sampah

GUMINGKUL—Pusat Studi Energi dan Lingkungan Universitas Ahmad Dahlan (UAD) menggelar program pengabdian masyarakat melalui Tim dari 2011 hingga 2021 di Kelurahan Semanu, Kapanewon Semanu, Gunungkidul. Program tersebut diharapkan dapat mewujudkan kemandirian peduli sampah yang keberagannya nanti akan mendukung sektor pariwisata khususnya di Kelurahan Semanu.

Kepala Pusat Studi Energi dan Lingkungan UAD, Okta Adhyanto mengatakan program yang dilaksanakan melibatkan tersebut merupakan integrasi pengelolaan sampah, bank sampah, TP5 3R hingga bank pakan ternak. "Program pada 2021 bertujuan pada peningkatan pengetahuan bagi masyarakat dan pemangku kepemimpinan terkait dengan pengelolaan sampah dan bank sampah. Tim Pusat Studi Energi dan Lingkungan yang terdiri beberapa dosen dengan dosen dengan bidang keilmuan berbeda-beda," ujar Okta dalam rilis yang diterima Harim Agri, Jumat (4/5).

Pelaksanaan program pertama dilakukan pada 10 April 2021 yaitu

Acara Pendampingan Program Pengelolaan Sampah di Kelurahan Semanu, Kapanewon Semanu oleh Pusat Studi dan Lingkungan UAD.

penyuluhan tentang kebiasaan dan kebiasaan lingkungan, bahaya dan risiko membuang sampah, bahaya dan risiko membuang sampah tidak pada tempatnya disampaikan oleh Eka Dyah Kumalasari, dosen Teknologi Pangan dan Ala Artesani dosen Alamansi. Kegiatan ini diikuti oleh 15 perwakilan dari dosen yang ada di Kelurahan Semanu.

Program yang kedua dilaksanakan pada 29 Mei 2021. Terdapat empat materi yang disampaikan, yakni penyuluhan pengelolaan organisasi untuk meningkatkan efektivitas

pengelolaan sampah yang disampaikan oleh dosen Teknik Industri, Endang Utami. Sosialisasi program pemantauan limbah sampah dan bagasi bekas disampaikan oleh Irena Arum Pimasari, dosen Teknik Industri. Selanjutnya sosialisasi tentang pengelolaan bank sampah yang disampaikan oleh Utaminingsih Linaeri, dosen Teknik Industri, dan terakhir sosialisasi pemanfaatan produk bank sampah terutamanya plastik, kertas dan minyak goreng bekas yang disampaikan oleh Gra Indah Budianti, dosen Teknik Kimia. [16] Number of sustainability-related startups

No.	Information
1	<p>Startup name: Sembada Group Startup area in UI Greenmetric questionnaire (SI, EC, WS, WR, TR, ED): EC URL: https://kubi.uad.ac.id/daftar-tenant/#toggle-id-5 Description: Sembada Group is a Business Unit of alumni of Universitas Ahmad Dahlan engaged in services/products with the movement of SPIRIT (Solute, Professional, Innovative, Responsive, and Trained). His business fields are: PCB Manufacturing, AC Service, Research Assistant, Training, and Renewable Energy Development. Photos:</p> <div style="display: flex; justify-content: space-around;"></div> <p style="text-align: center;">Perawatan atau pencucian AC</p>
2	<p>Startup name: Sprulina Shoap Startup area in UI Greenmetric questionnaire (SI, EC, WS, WR, TR, ED): WS URL: https://kubi.uad.ac.id/daftar-tenant/#toggle-id-6 Description: Spirulina soap is a product produced by a chemical engineering student study club (KS) at a price of around Rp. 10,000 per stick. From these products, they will not only produce spirulina soap, but also soaps such as dish and hand soap, and also aromatherapy candles. For now, the most popular product are aromatherapy candles. A single production of 50 pcs with a unit selling price is at Rp. 5.000.- Photos:</p> 
3	<p>Startup name: PT Jogy Media Inovasi (Simonkori) Startup area in UI Greenmetric questionnaire (SI, EC, WS, WR, TR, ED): EC URL: https://kubi.uad.ac.id/daftar-tenant/#toggle-id-9</p>

	<p>Description: Simonkori is used for hydroponic farming systems, farming without using soil. Not only for plants, Simonkori can also be used to monitor shrimp ponds. Simonkori has several sensors that can simultaneously detect several variables such as water pH and tds, ec (electronic conductivity) sensors, water axis, oxygen content in water and salinity.</p> <p>Photos:</p> 
<p>4</p>	<p>Startup name: RespoKes</p> <p>Startup area in UI Greenmetric questionnaire (SI, EC, WS, WR, TR, ED): EC</p> <p>URL: https://lppm.uad.ac.id/kunjungan-pimpinan-uad-ke-workshop-respokes/</p> <p>Description: Respokes is a prototype of LPPM UAD's innovation in collaboration with alumni and youth movement of Masjid Al Hidayah Ganjahan. This response is equipped with a temperature monitoring system and an automatically controlled hand washing faucet or hand sanitizer. It is hoped that this Response will become a product of UAD for the community in facing new adaptations by complying with health protocols.</p> <p>Photos:</p> 

The number of startups related to sustainability at Universitas Ahmad Dahlan is 4 startups
